WEB DEVELOPMENT ACTIVITY REPORT

Consolidated report based on the supplied browser and repository screenshots

Projects covered: AdventureX, TravelGo, CineView, and the WD-Activity-Based-Learning GitHub repository.

Prepared from the nine screenshots provided in this conversation.

1. Executive Summary

This report consolidates the visible evidence from the supplied screenshots into one document. The screenshots show three front-end website concepts—an adventure discovery page (AdventureX), a transport booking interface (TravelGo), and a movie discovery/review page (CineView)—along with a GitHub repository used to organize HTML and CSS activity files.

2. Repository Overview

The GitHub screenshot shows a public repository named **WD-Activity-Based-Learning** under the account **manasasidda03-byte**. The visible file list includes **19th activity.html/.css**, **22nd activity.html/.css**, **30th activity.html/.css**, and **README.md**. The repository page also shows the main branch, one branch, and seven commits at the time of capture. This suggests the activities are being maintained as separate HTML/CSS exercises.

3. Website Concepts

3.1 AdventureX — Adventure Discovery

The AdventureX page presents an outdoor-adventure theme. Its visible header includes a briefcase-style icon and the brand name, with navigation links for Trips and Safety. The hero section uses the headline *Explore Beyond Limits*, supporting copy about mountains and trails, and an “Explore Trips” link. A “Popular Adventures” section follows with a large mountain-valley photograph. The screenshot primarily documents the page structure and visual content; styling appears minimal or not loaded in the captured view.

3.2 TravelGo — Transport Search and Booking

TravelGo is a journey-booking interface. The search form contains fields for origin, destination, date, transport mode, and passengers, plus a Search button. The service listing displays an Express Bus from Vijayawada to Hyderabad departing at 8:00 AM, with 18 seats available and a fare of ■650. A Superfast Train from Vijayawada to Chennai is shown departing at 10:30 AM, with 24 seats available and a fare of ■850.

The seat-selection section includes an Available/Booked legend, numbered seat controls, passenger type (Adult), a total-fare display, and a Book Ticket button. A fare-details table summarizes service, time, and fare. The screenshots show the intended booking flow and sample data, but do not establish whether search, seat state, fare calculation, or booking persistence has been tested end-to-end.

3.3 CineView — Movie Discovery and Reviews

CineView is a movie discovery and review page. The landing area includes Movies and Reviews navigation, a “Discover Great Movies” headline, introductory text, and a “Popular Movies” section. The visible movie content includes Oppenheimer (Drama · History, 2023; cast listing includes Cillian Murphy; displayed rating 8.3/10), Spider-Man: Across the Spider-Verse (Animation · Action, 2023), and Barbie (Comedy · Fantasy, 2023; cast listing includes Margot Robbie; displayed rating 7.0/10). The critic-review section shows short review excerpts and critic ratings, including 9/10 entries for Oppenheimer and Spider-Man: Across the Spider-Verse.

4. Observations and Recommendations

• **Improve presentation:** Add a consistent stylesheet, spacing, typography, responsive layouts, and reusable cards so the pages look intentional across screen sizes.

• **Check navigation:** Verify that Trips/Safety, Search/Services, and Movies/Reviews links lead to the expected sections or pages.

• **Validate form inputs:** Require origin, destination, date, and a valid passenger count; prevent invalid or past travel dates where appropriate.

• **Clarify booking behavior:** Make seat states visually distinct, prevent selection of booked seats, update totals from the chosen service and seat count, and show a confirmation after booking.

• **Improve accessibility:** Use labels for form fields, meaningful alternative text for images, visible keyboard focus, semantic headings, and accessible status messages.

• **Keep repository documentation current:** Add a README with project descriptions, how to open each HTML file, file-to-activity mapping, and any known limitations.

• **Test on multiple viewports:** The screenshots show a desktop browser. Check mobile and tablet layouts and confirm that large images do not overflow the viewport.

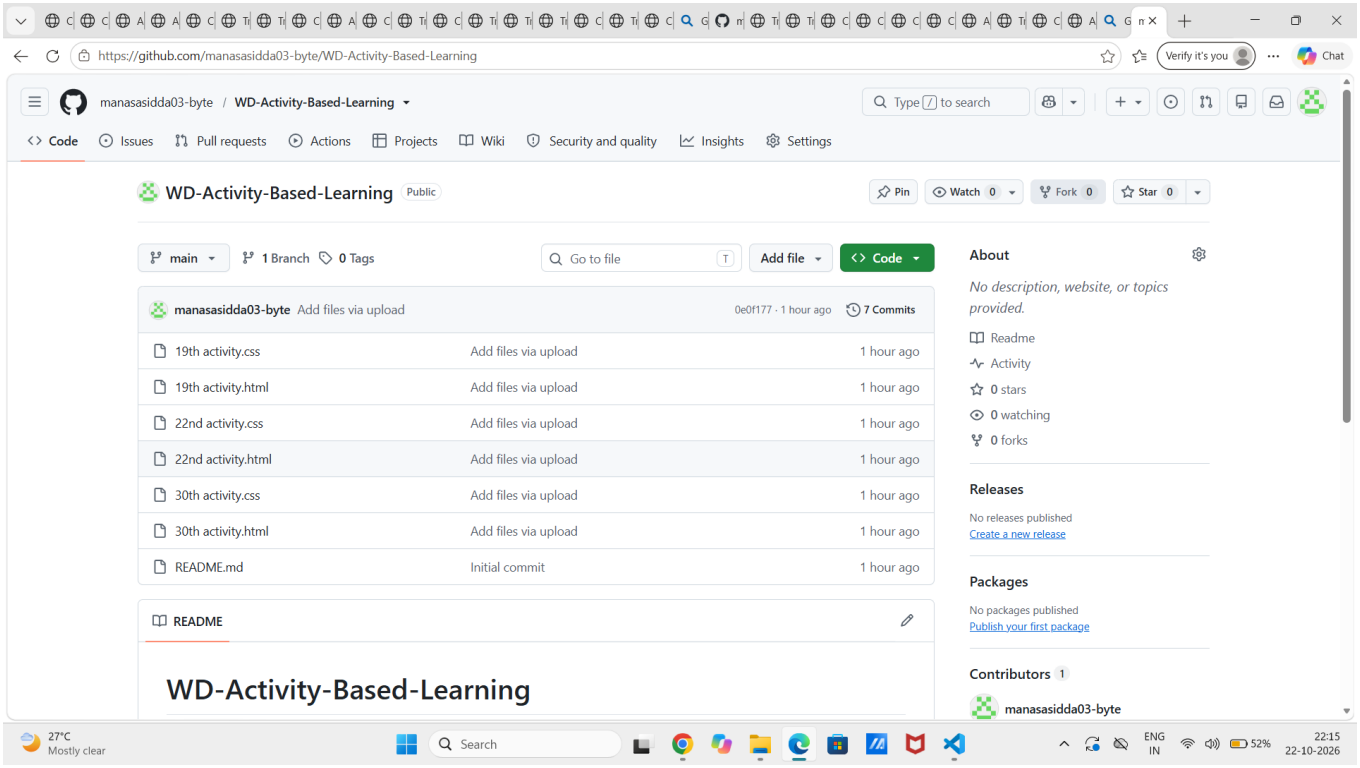

5. Scope and Limitations

This report is based only on the supplied screenshots, not on a review of the source HTML/CSS or live application behavior. Descriptions of visible fields, titles, routes, fares, ratings, and repository contents reflect what can be read in the images. The screenshots do not prove that the controls are functional, that the displayed travel data is live, or that the sample movie ratings are sourced from an external review service.

Appendix A — Screenshot Evidence

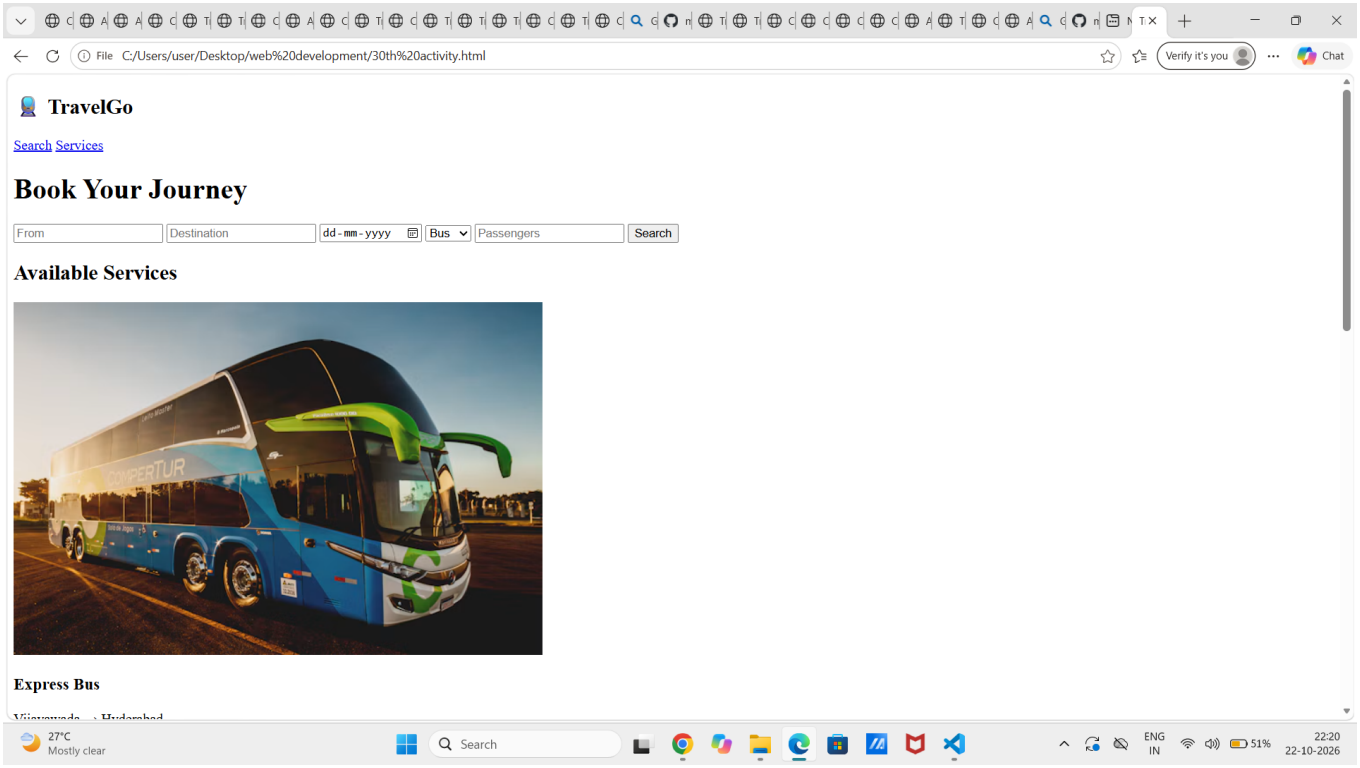

The following pages preserve all nine supplied screenshots as visual evidence, with captions identifying the visible content.

Evidence 1

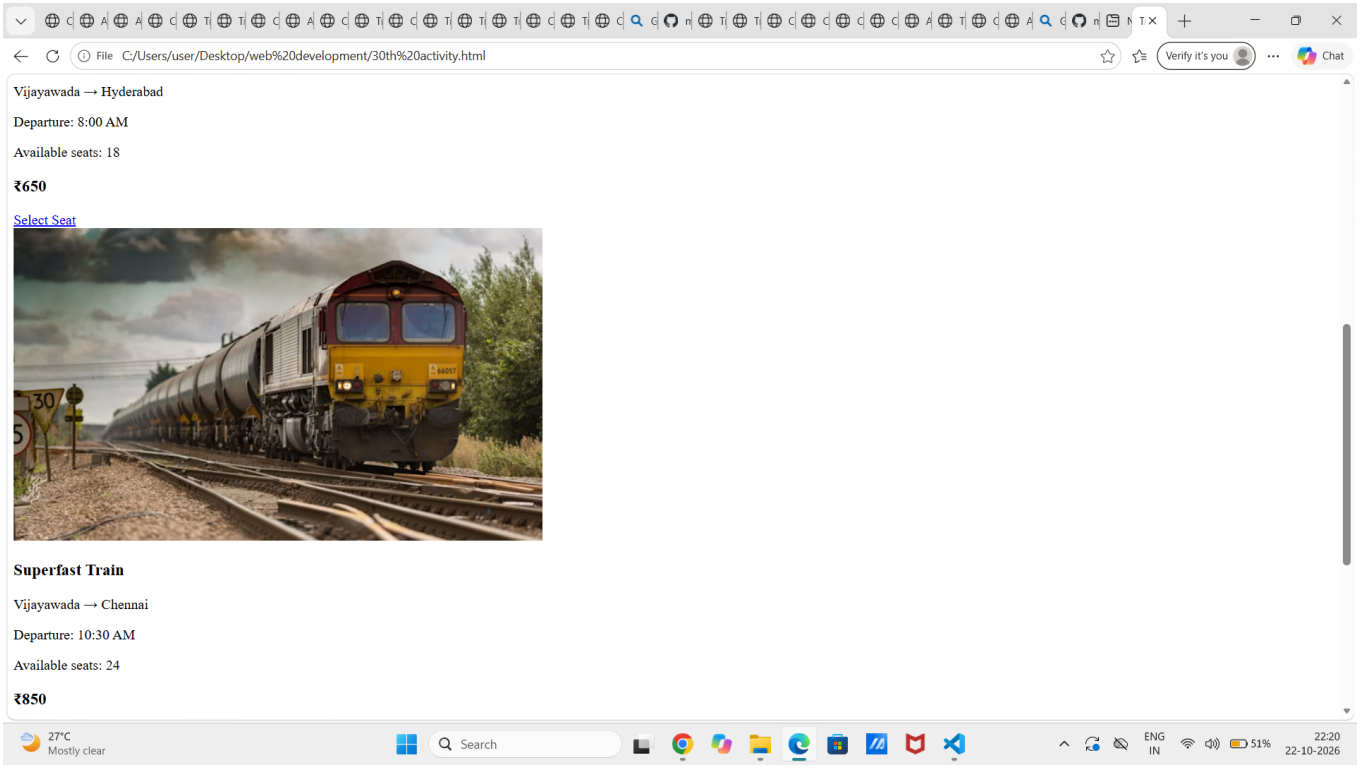

Screenshot 1 — AdventureX landing page, showing the brand, navigation, headline, and mountain-valley imagery.

Evidence 2

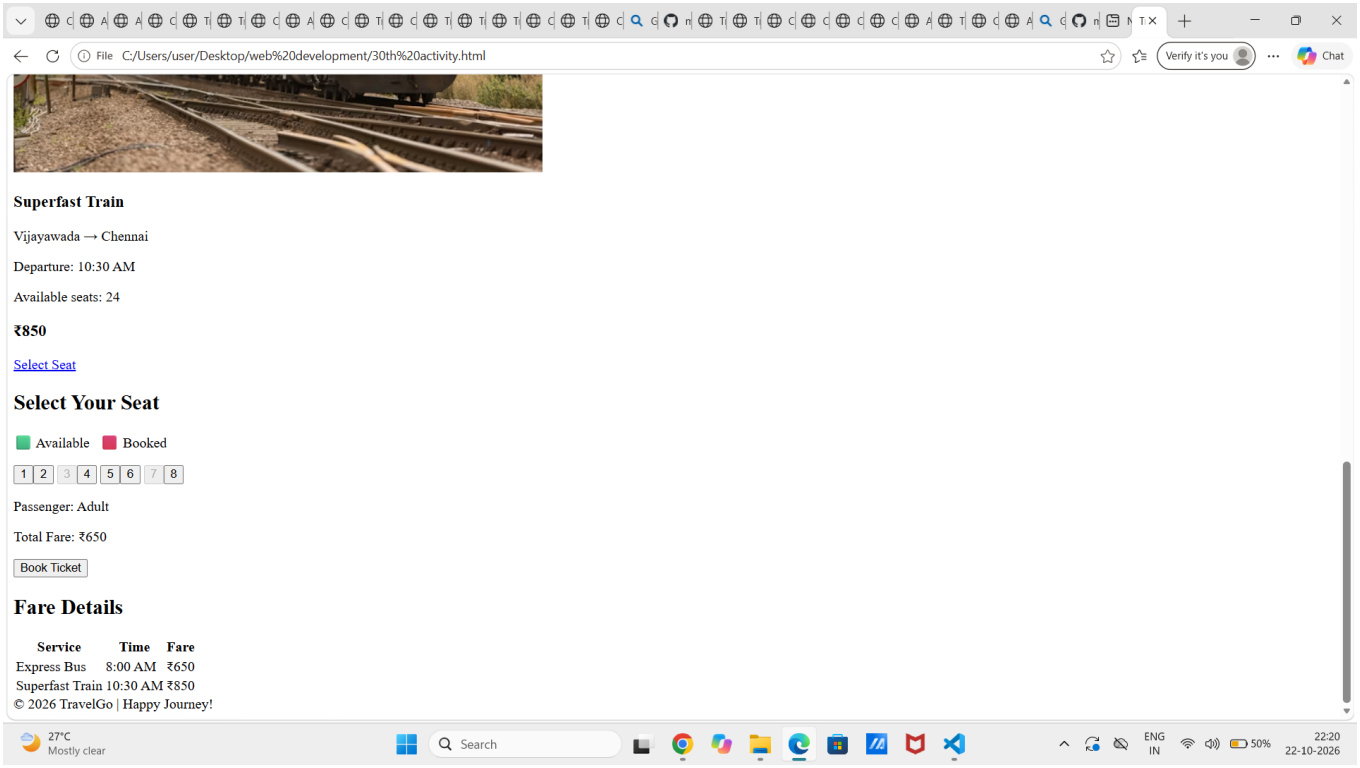

Screenshot 2 — GitHub repository overview for WD-Activity-Based-Learning, including HTML/CSS activity files and README.

Evidence 3

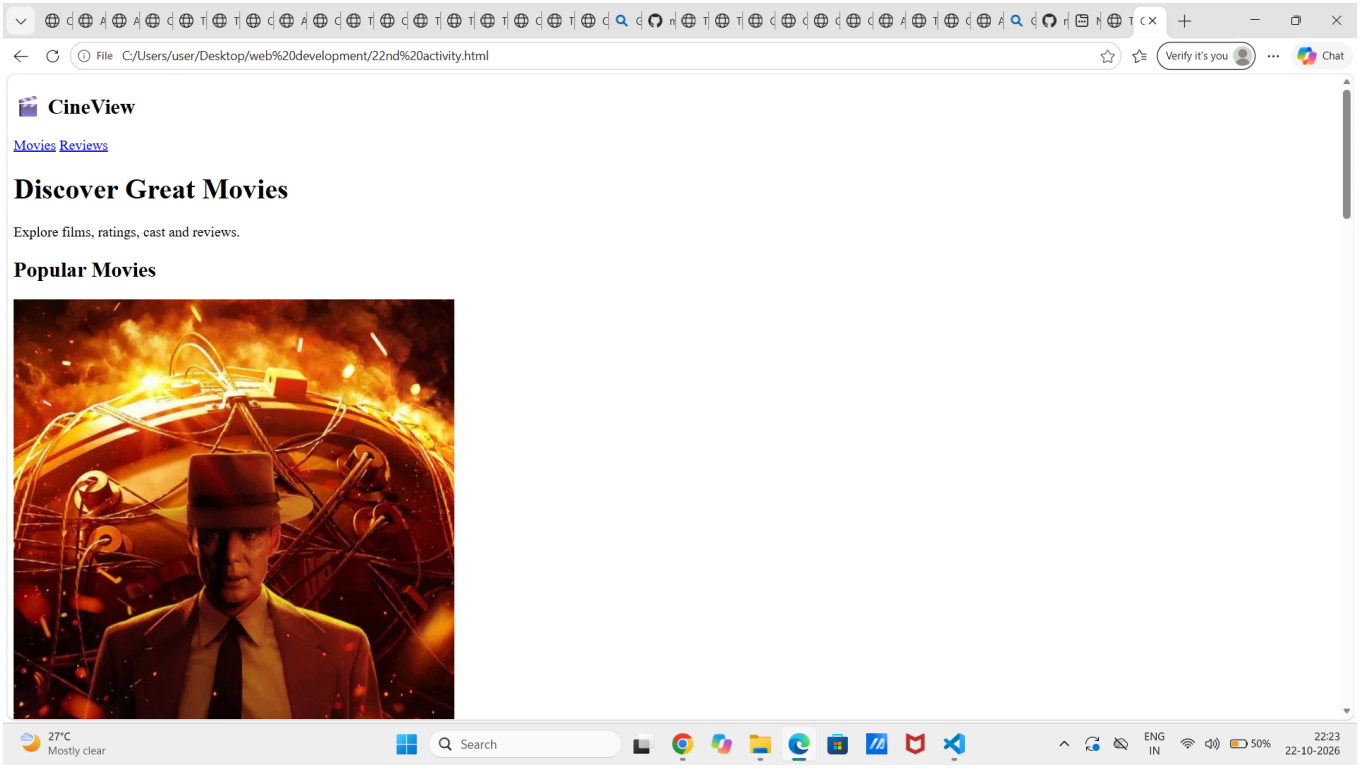

Screenshot 3 — TravelGo booking page with origin, destination, travel date, transport type, passenger field, and search control.

Evidence 4

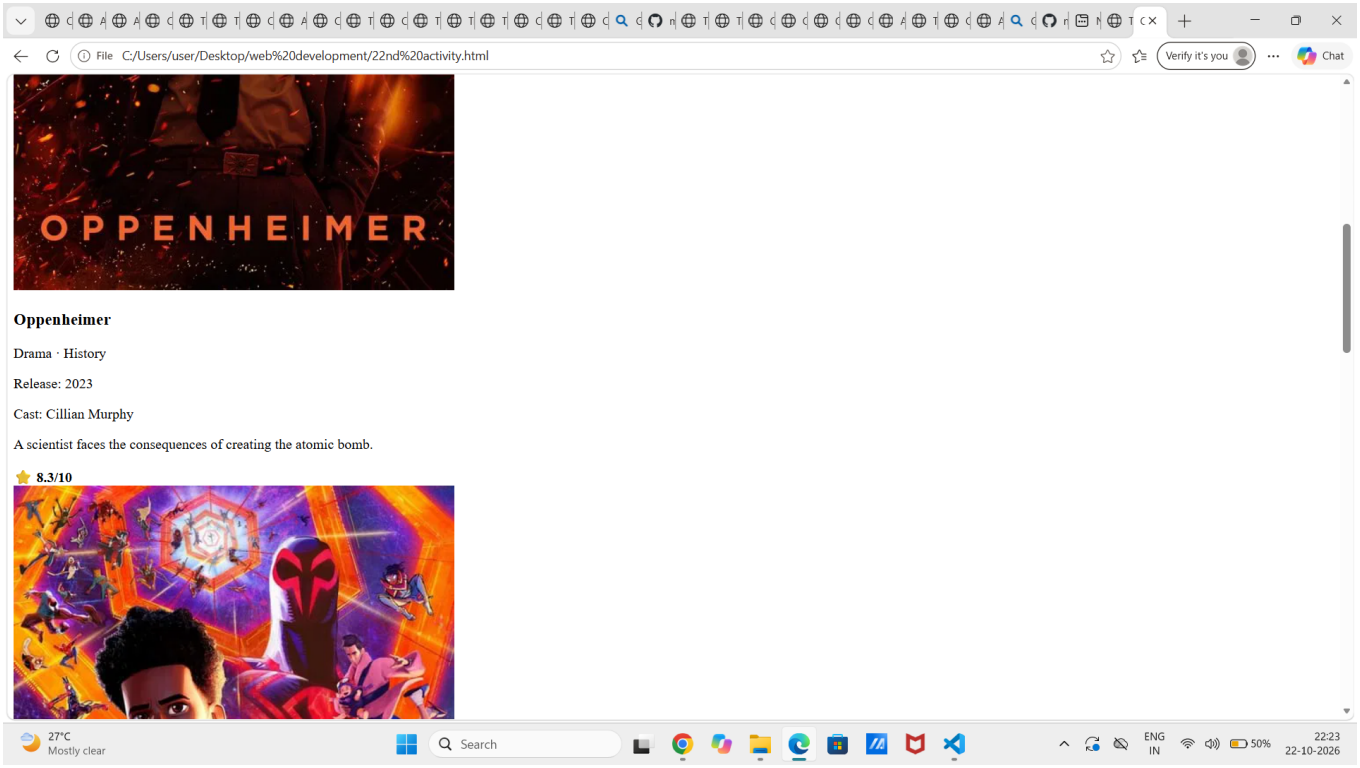

Screenshot 4 — TravelGo service listing showing the Express Bus route from Vijayawada to Hyderabad, departure at 8:00 AM, 18 seats, and ■650 fare.

Evidence 5

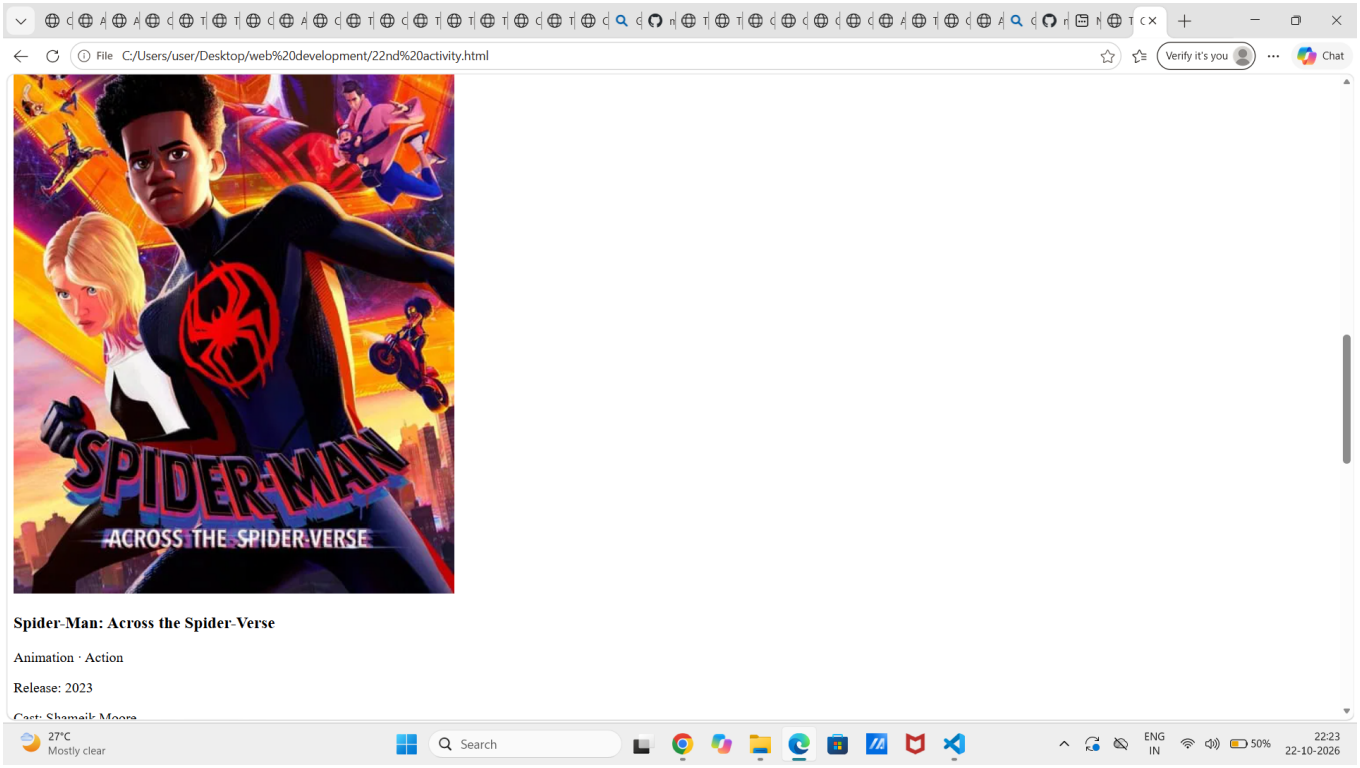

Screenshot 5 — TravelGo train service details and seat-selection area, including the Vijayawada–Chennai service, 10:30 AM departure, 24 seats, and ■850 fare.

Evidence 6

Screenshot 6 — TravelGo seat selector, availability legend, passenger type, total fare, booking control, and fare-details table.

Evidence 7

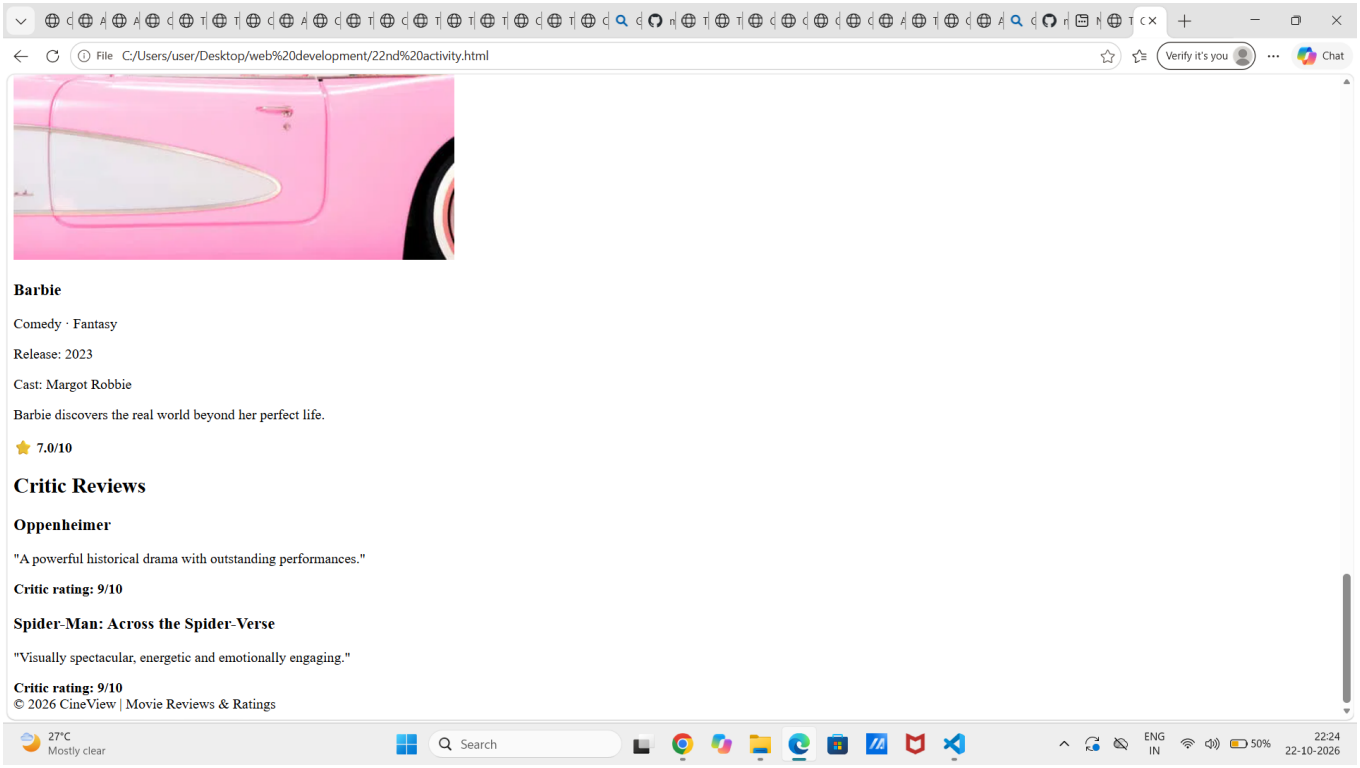

Screenshot 7 — CineView movie-discovery landing page with navigation and the Oppenheimer poster.

Evidence 8

Screenshot 8 — CineView movie details for Oppenheimer and Spider-Man: Across the Spider-Verse, including genres, release year, cast/summary details, and a displayed rating.

Evidence 9

Screenshot 9 — CineView Barbie details and critic reviews, including a short review for Oppenheimer and critic ratings.
